Result of Cloud & Virtualization Quiz:

Total Questions	Full Score	Passing Rate	Your Score	Correct Answer Percentage	Elapsed
6	70	80%	70	100%	00:01:42

Congratulations!

You passed this test!

If you want to retake this quiz, please press Ctrl + F5 on Windows or press CMD + R on Mac.

Your answers are shown below:

Question 1

Which statement identifies the functionality of virtual machines?

- A. Virtualized servers run most efficiently when they are physically connected to a switch that is separate from the hypervisor
- **B. The hypervisor can virtualize physical components including CPU, memory, and storage**
- C. Each hypervisor can support a single virtual machine and a single software switch
- D. The hypervisor communicates on Layer 3 without the need for additional resources

Question 2

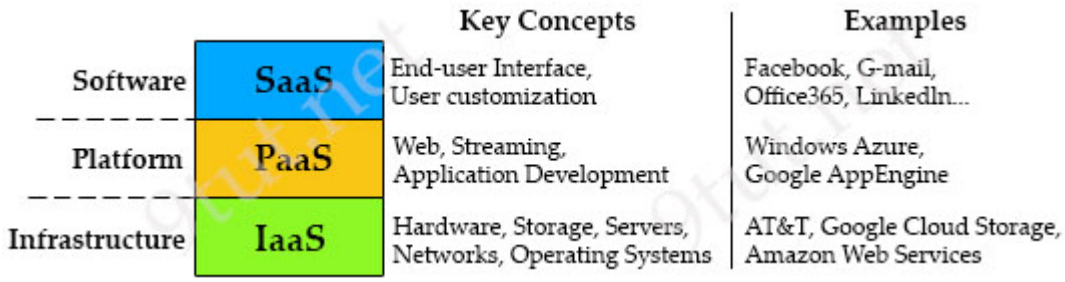

An organization has decided to start using cloud-provided services. Which cloud service allows the organization to install its own operating system on a virtual machine?

- A. platform-as-a-service
- B. software-as-a-service
- C. network-as-a-service
- **D. infrastructure-as-a-service**

Explanation

Below are the 3 cloud supporting services cloud providers provide to customer:

+ **SaaS** (Software as a Service): SaaS uses the web to deliver applications that are managed by a third-party vendor and whose interface is accessed on the clients' side. Most SaaS applications can be run directly from a web browser without any downloads or installations required, although some require plugins.
+ **PaaS** (Platform as a Service): are used for applications, and other development, while providing cloud components to software. What developers gain with PaaS is a framework they can build upon to develop or customize applications. PaaS makes the development, testing, and deployment of applications quick, simple, and cost-effective. With this technology, enterprise operations, or a third-party provider, can manage OSes, virtualization, servers, storage, networking, and the PaaS software itself. Developers, however, manage the applications.
+ **IaaS** (Infrastructure as a Service): self-service models for accessing, monitoring, and managing remote datacenter infrastructures, such as compute (virtualized or bare metal), storage, networking, and networking services (e.g. firewalls). Instead of having to purchase hardware outright, users can purchase IaaS based on consumption, similar to electricity or other utility billing.

In general, IaaS provides hardware so that an organization can install their own operating system.

Question 3

Anycompany has decided to reduce its environmental footprint by reducing energy costs, moving to a smaller facility, and promoting telecommuting. What service or technology would support this requirement?

- A. Cisco ACI
- **B. cloud services**
- C. APIC-EM
- D. data center

Question 4

What are two fundamentals of virtualization? (Choose two)

- A. The environment must be configured with one hypervisor that serves solely as a network manager to monitor SNMP traffic
- **B. It allows logical network devices to move traffic between virtual machines and the rest of the physical network**
- **C. It allows multiple operating systems and applications to run independently on one physical server**
- D. It allows a physical router to directly connect NICs from each virtual machine into the network
- E. It requires that some servers, virtual machines and network gear reside on the Internet

Question 5

What role does a hypervisor provide for each virtual machine in server virtualization?

- **A. control and distribution of physical resources**
- B. software-as-a-service
- C. services as a hardware controller
- D. infrastructure-as-a-service

Explanation

Each virtual machine has its own set of virtual hardware (RAM, CPU, NIC) upon which an operating system and fully configured applications are loaded. The operating system sees a consistent, normalized set of hardware regardless of the actual physical hardware components.

Question 6

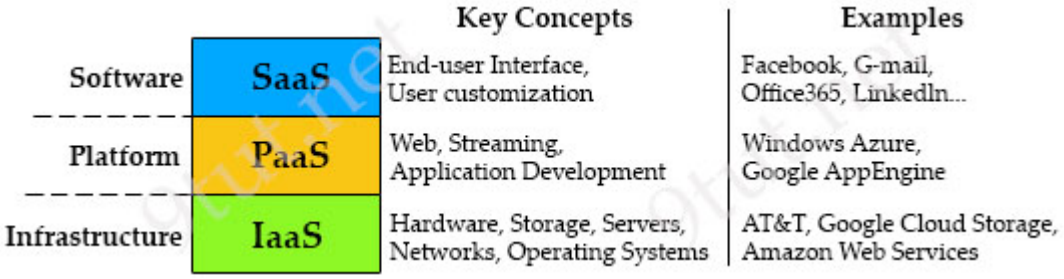

A manager asks a network engineer to advise which cloud service models are used so employees do not have to waste their time installing, managing, and updating software which is only used occasionally. Which cloud service model does the engineer recommend?

- A. infrastructure-as-a-service
- **B. software-as-a-service**
- C. platform-as-a-service
- D. business process as service to support different types of service

Explanation

Three cloud supporting services cloud providers provide to customer:

+ **SaaS** (Software as a Service): SaaS uses the web to deliver applications that are managed by a third-party vendor and whose interface is accessed on the clients' side. Most SaaS applications can be run directly from a web browser without any downloads or installations required, although some require plugins.
+ **PaaS** (Platform as a Service): are used for applications, and other development, while providing cloud components to software. What developers gain with PaaS is a framework they can build upon to develop or customize applications. PaaS makes the development, testing, and deployment of applications quick, simple, and cost-effective. With this technology, enterprise operations, or a third-party provider, can manage OSes, virtualization, servers, storage, networking, and the PaaS software itself. Developers, however, manage the applications. PaaS provides everything except applications.
+ **IaaS** (Infrastructure as a Service): self-service models for accessing, monitoring, and managing remote datacenter infrastructures, such as compute (virtualized or bare metal), storage, networking, and networking services (e.g. firewalls). Instead of having to purchase hardware outright, users can purchase IaaS based on consumption, similar to electricity or other utility billing.

Question: “Which cloud service model does the engineer recommend?”
This question is incomplete. Important informations are missing.

2. Study Buddy
   March 10th, 2021

   Question: “Which cloud service model does the engineer recommend?”
   Please complete the question @9tut. Thanks

3. 9tut
   March 11th, 2021

   Thanks for your detection, we have just fixed that question.
