Result of DNA Center Quiz:

Total Questions	Full Score	Passing Rate	Your Score	Correct Answer Percentage	Elapsed
5	60	80%	60	100%	00:00:43

Congratulations!

You passed this test!

If you want to retake this quiz, please press Ctrl + F5 on Windows or press CMD + R on Mac.

Your answers are shown below:

Question 1

What makes Cisco DNA Center different from traditional network management applications and their management of networks?

- **A. It abstracts policy from the actual device configuration**
- B. It does not support high availability of management functions when operating in cluster mode
- C. It modular design allows someone to implement different versions to meet the specific needs of an organization
- D. It only supports auto-discovery of network elements in a green field deployment.

Question 2

Which two capacities of Cisco DNA Center make it more extensible as compared to traditional campus device management? (Choose two)

- A. modular design that is upgradable as needed
- **B. REST APIs that allow for external applications to interact natively**
- C. adapters that support all families of Cisco IOS software
- **D. SDKs that support interaction with third-party network equipment**
- E. customized versions for small, medium, and large enterprises

Explanation

Cisco DNA Center offers 360-degree extensibility through four distinct types of platform capabilities:

+ **Intent-based APIs** leverage the controller and enable business and IT applications to deliver intent to the network and to reap network analytics and insights for IT and business innovation.
+ **Process adapters**, built on integration APIs, allow integration with other IT and network systems to streamline IT operations and processes.
+ **Domain adapters**, built on integration APIs, allow integration with other infrastructure domains such as data center, WAN, and security to deliver a consistent intent-based infrastructure across the entire IT environment.
+ **SDKs** allow management to be extended to third-party vendor's network devices to offer support for diverse environments.

Question 3

How does Cisco DNA Center gather data from the network?

- A. The Cisco CU Analyzer tool gathers data from each licensed network device and streams it to the controller
- B. Devices establish an iPsec tunnel to exchange data with the controller
- C. Devices use the call-home protocol to periodically send data to the controller
- **D. Network devices use different services like SNMP, syslog, and streaming telemetry to send data to the controller**

Explanation

Explanation

Cisco DNA Center collects data from several different sources and protocols on the local network, including the following: traceroute; syslog; NetFlow; Authentication, Authorization, and Accounting (AAA); routers; Dynamic Host Configuration Protocol (DHCP); Telnet; wireless devices; Command-Line Interface (CLI); Object IDs (OIDs); IP SLA; DNS; ping; Simple Network Management Protocol (SNMP); IP Address Management (IPAM); MIB; Cisco Connected Mobile Experiences (CMX); and AppDynamics.

Question 4

How do traditional campus device management and Cisco DNA Center device management differ in regards to deployment?

- A. Traditional campus device management allows a network to scale more quickly than with Cisco DNA Center device management
- **B. Cisco DNA Center device management can deploy a network more quickly than traditional campus device management**
- C. Cisco DNA Center device management can be implemented at a lower cost than most traditional campus device management options
- D. Traditional campus device management schemes can typically deploy patches and updates more quickly than Cisco DNA Center device management

Explanation

With Intent-based APIs, the administrator configures the intent or outcome desired of a set of security polices. The DNA Center then communicates with the devices to determine exactly the required configuration to achieve that intent. Then the complete configuration is sent down to the devices -> This helps reduce time to deploy a network compare to the traditional networks.

Question 5

What is an advantage of Cisco DNA Center versus traditional campus device management?

- A. It enables easy autodiscovery of network elements m a brownfield deployment
- B. It is designed primarily to provide network assurance
- C. It supports high availability for management functions when operating in cluster mode
- **D. It supports numerous extensibility options including cross-domain adapters and third-party SDKs**
