Question 5

Refer to the exhibit. Which password must an engineer use to enter the enable mode?

```
Atlanta#config t
Atlanta(config)#aaa new-model
Atlanta(config)#aaa authentication login default local
Atlanta(config)#line vty 0 4
Atlanta(config-line)#login authentication default
Atlanta(config-line)#exit
Atlanta(config)#username ciscoadmin password adminadmin123
Atlanta(config)#username ciscoadmin privilege 15
Atlanta(config)#enable password cisco123
Atlanta(config)#enable secret testing1234
Atlanta(config)#end
```

Options

A. testing1234

B. cisco123

C. default

D. adminadmin123

Answer

A. testing1234

Source explanation

If neither the enable password command nor the enable secret command is configured, and if there is a line password configured for the console, the console line password serves as the enable password for all VTY sessions -> The “enable secret” will be used first if available, then “enable password” and line password.

Question 6

What is the primary difference between AAA authentication and authorization?

Options

A. Authentication verifies a username and password, and authorization handles the communication between the authentication agent and the user database

B. Authentication controls the system processes a user can access and authorization logs the activities the user initiates

C. Authentication identifies and verifies a user who is attempting to access a system, and authorization controls the tasks the user can perform

D. Authentication identifies a user who is attempting to access a system, and authorization validates the users password

Answer

C. Authentication identifies and verifies a user who is attempting to access a system, and authorization controls the tasks the user can perform

Source explanation

AAA stands for Authentication, Authorization and Accounting.

+ Authentication: Specify who you are (usually via login username & password)
+ Authorization: Specify what actions you can do, what resource you can access
+ Accounting: Monitor what you do, how long you do it (can be used for billing and auditing)

An example of AAA is shown below:

+ Authentication: “I am a normal user. My username/password is user_tom/learnforever“
+ Authorization: “user_tom can access LearnCCNA server via HTTP and FTP“
+ Accounting: “user_tom accessed LearnCCNA server for 2 hours“. This user only uses “show” commands.
