VPN Questions

3 questions | Original English questions and source answers

Question 1

What is a function of a remote access VPN?

Options

A. used exclusively when a user is connected to a company’s internal network

B. allows the users to access company internal network resources through a secure tunnel

C. establishes a secure tunnel between two branch sites

D. used cryptographic tunneling to protect the privacy of data for multiple users simultaneously

Answer

B. allows the users to access company internal network resources through a secure tunnel

Question 2

Which type of VPN uses a hub-and-spoke configuration to establish a full mesh topology?

Options

A. dynamic multipoint VPN

B. MPLS VPN

C. GRE over IPsec

D. IPsec virtual tunnel interface

Answer

A. dynamic multipoint VPN

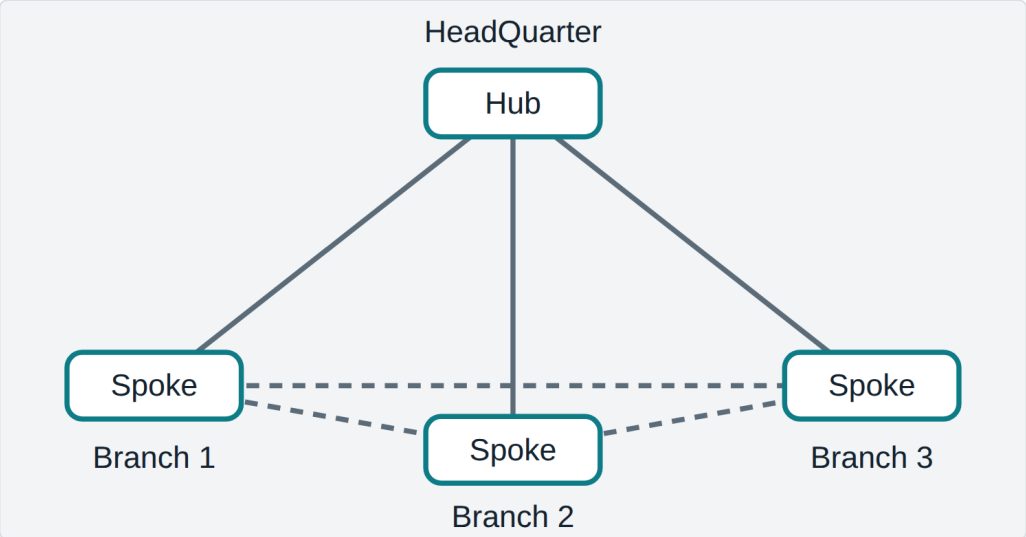

Source explanation

Dynamic Multipoint VPN (DMVPN) is a solution of Cisco. DMVPN provides the following advantages:

+ Provides full meshed connectivity with simple Hub-and-Spoke topology. The spokes can communicate between each other without going through Hub
+ Only one static public IP address is required on Hub. Spokes can use dynamic (unknown) public IP addresses.
+ The configuration is simple even in large network. No additional configuration is required on Hub when new Spokes are added.

Question 3

What mechanism carries multicast traffic between remote sites and supports encryption?

Options

A. IPsec over ISATAP

B. ISATAP

C. GRE

D. GRE over IPsec

Answer

D. GRE over IPsec
